

INTELLIGENCE WATCH

Ireland's only 24/7/365 CCTV intruder monitoring services with dedicated back up facilities

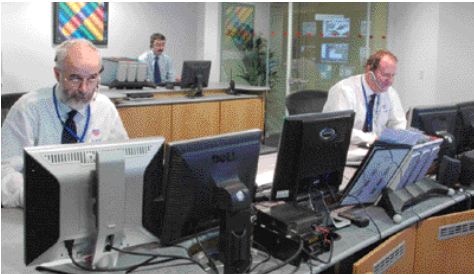

WELCOME TO I-WATCH

i-Watch (Intelligence Watch) provides monitoring services for residential and commercial customers. i-Watch operates a fully approved, 24 hour alarm monitoring facility in Citywest, Dublin which provides monitoring services for thousands of properties in Ireland.

i-Watch also provides a CCTV monitoring service that uses the latest digital technology to monitor and secure hundreds of businesses, homes and developments in Ireland and abroad.

Our full range of services includes:

- **CCTV monitoring**
- **Alarm monitoring**
- **Key-holding**
- **Rapid alarm response**
- **Mobile patrols**
- **Static guards**
- **Data Hosting**
- **Open and Close Monitoring**

ROBUST SERVICE LEVELS

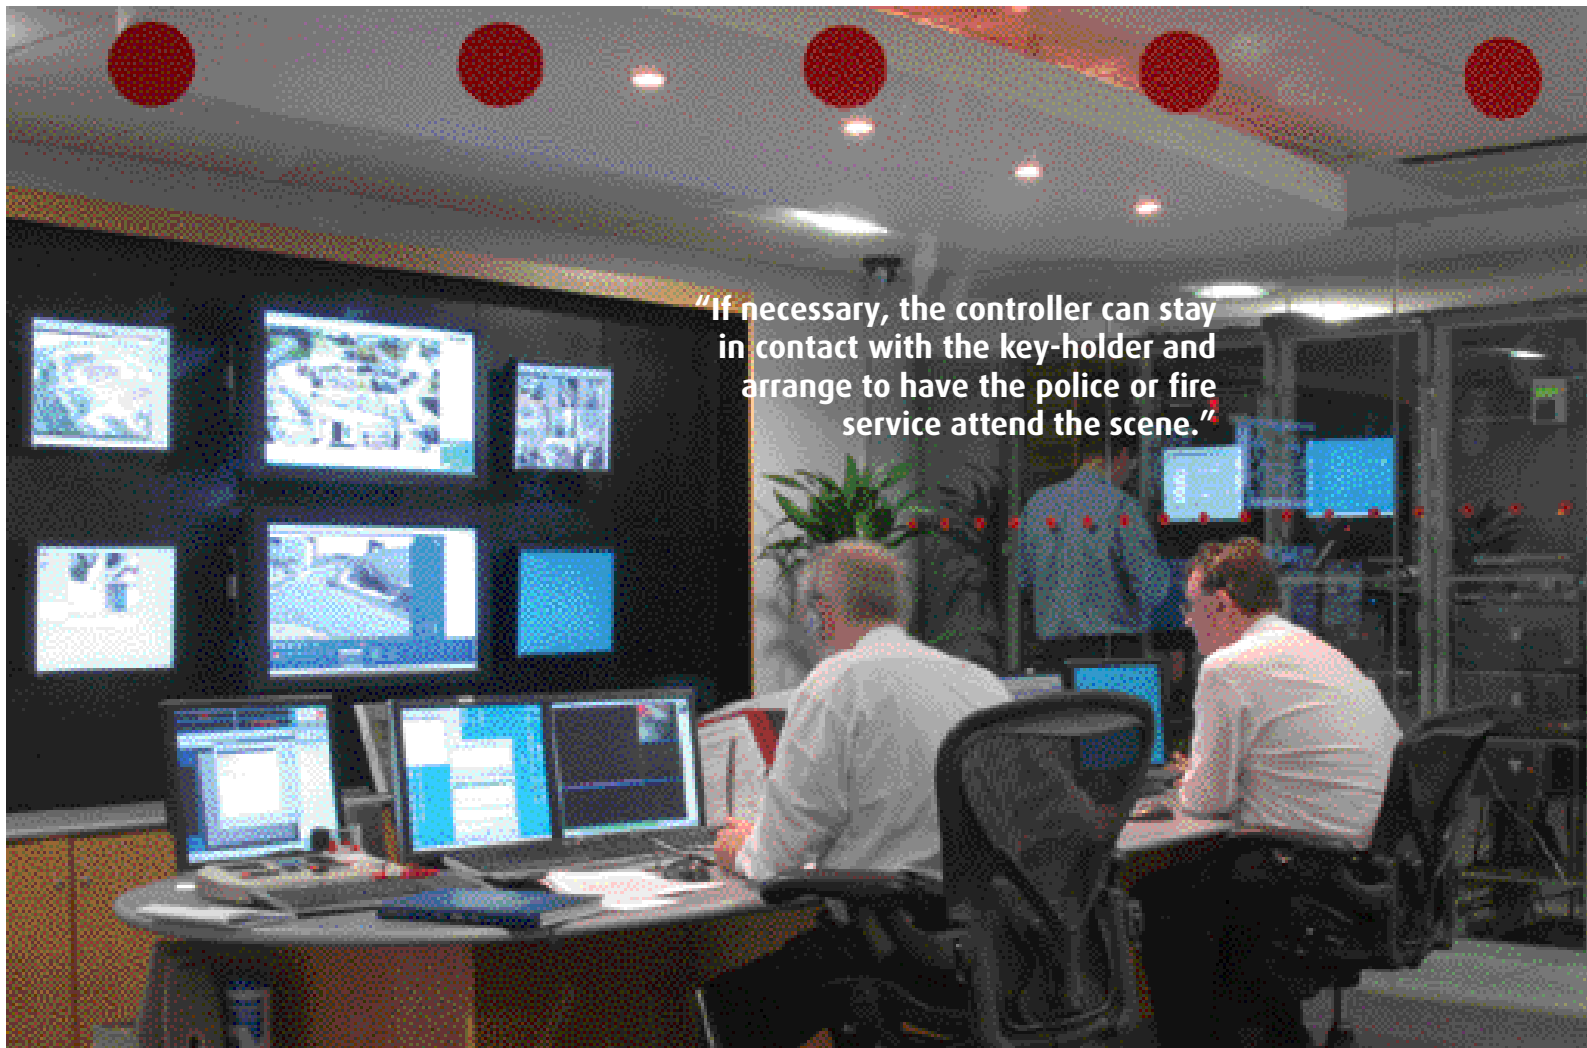

i-Watch operates from a purpose-built central station at the National Digital Park in Citywest in Dublin 24, which consists of two complementary facilities – a Closed Circuit Television (CCTV) room and an Alarm Monitoring centre. As well as our main control station we also have a business continuity facility in the heart of the city in the unlikely event of our main site going down.

The Citywest facility is equipped to the latest technological and security standards. We also have service contracts with two large telecommunications providers so that if one supply goes down, the other will be instantly available.

In an emergency, all incoming and outgoing alarm signals can be re-routed to our City Centre facility at the flick of a switch. The data room at Citywest contains a main system server which backs up information in real time to our City Centre location.

Citywest also has its own electricity generator which can run indefinitely in case of a power outage, while an uninterruptible power supply (UPS) system ensures a constant supply of power to monitoring and camera equipment.

“ i-Watch also provides a CCTV monitoring service that uses the latest digital technology to monitor and secure hundreds of homes, housing developments and business premises in Ireland and abroad. ”

A control room with multiple monitors and two operators. The room is dimly lit, with the primary light source being the screens. The operators are seated at a desk with several computer monitors. The background wall is covered with more monitors displaying various data and video feeds. The ceiling has several red circular lights.

“If necessary, the controller can stay in contact with the key-holder and arrange to have the police or fire service attend the scene.”

“We also have service contracts with two large telecommunications providers so that if one supply goes down, the other will be instantly available.”

HOW MONITORING WORKS

We monitor by a digital communicator over phone lines. If an intruder or fire alarm is activated at a client premises, a signal is sent to the monitoring centre and displayed on workstations manned by our experienced controllers. On receipt of this signal, a controller will call the key-holder, Gardai, fire service or security staff, as arranged with the client. If necessary, the controller can stay in contact with the key-holder and arrange to have the police or fire service attend the scene.

If a panic alarm is activated, it will be displayed as an urgent message on a controller's workstation. In line with standard operating procedures, the controller will then instantly notify the Gardai.

i-Watch also offers a key-holding service and we currently have key-holding contracts with more than 1,000 customers. i-Watch has twelve patrol vehicles in its rapid alarm response unit, one of whom will be dispatched promptly to arrive at and secure a premises in the event of an alarm activation. Our sister company, Carlisle Security Plus, where necessary can provide a physical security presence.

“a signal is sent to the monitoring centre and displayed on workstations manned by our experienced controllers.”

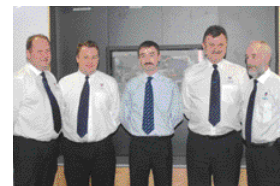

“For example, a premises owner can use the reports to check whether staff are opening and closing the premises at the correct time.”

COMPLETE REPORTING

Every morning, our clients receive automatically generated emails that detail any alarm activations that have happened overnight.

As well as being useful for auditing and customer services purposes, the reports can also be used as management tools. For example, a shop owner can use the reports to check whether staff are opening and closing the premises at the correct time.

PUTTING YOU IN THE PICTURE

Maybe you own a second home overseas or a business premises? Wouldn't you like to know that someone is keeping an eye on your property when you are not there? Well now you can, thanks to our professional closed circuit television (CCTV) monitoring service.

Think of CCTV as an additional layer of security for your property. Cameras are placed on the perimeter of your property and link back to our central station over broadband or ISDN.

External motion detectors are installed with each camera covering the same areas. If the system detects an intruder, the images from the cameras are immediately transmitted to the i-Watch centre. Our controllers then view images from these cameras to check what has triggered the alarm in the first instance, challenge them via the audio link and then advise either the Gardai or the keyholder.

The cameras can also work in conjunction with a conventional monitored alarm system. If an alarm is activated, the cameras can be used to check what has caused the activation.

All of our CCTV services include a daily systems check, where our controllers contact all the cameras to make sure they are working properly and haven't been interfered with. In addition, we do an audio check once a week. Extra services include 1 to 1 intercom interface, remote opening barriers and doors to allow out-of-hours access.

“If an alarm is activated, the cameras can be used to check what has triggered it.”

SEAL OF QUALITY

Licensed by the Private Security Authority, i-Watch is EN ISO 9002 accredited and complies with Irish Standard IS:228, which covers alarm monitoring centres. We are unique within the industry in that both our alarm monitoring centre and CCTV facility are fully IS:228 compliant and our monitoring staff are trained to the highest levels.

“When a beam is broken or sensor picks up movement, this activates the camera while simultaneously alerting the CCTV monitoring centre.”

iWatch- Intelligence Watch is a new state-of-the-art intruder monitoring service that meets with the highest security standards and utilises the latest CCTV/video monitoring technology available on the market today. This allows for complex surveillance solutions with huge savings against the traditional costs of static security. We currently service all types of facilities from government agencies and business parks to plant and machinery compounds and county council amenities. Our remote managed services complies with all the statutory standards and we can digitise information for backup or surveillance.
